

Thailand: Food & Nutrition Dashboard

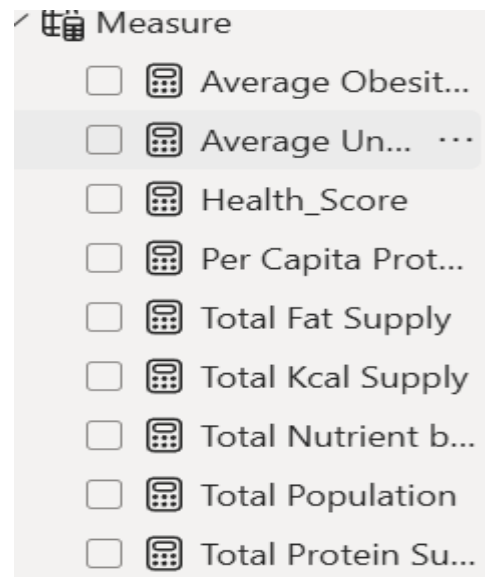

1. Overview

An independent Power BI project completed during my internship, using publicly available data from Kaggle. The dashboard explores Thailand's food supply and nutrition indicators, including calorie, protein and fat supply across food categories as well as population, obesity and undernourishment indicators.

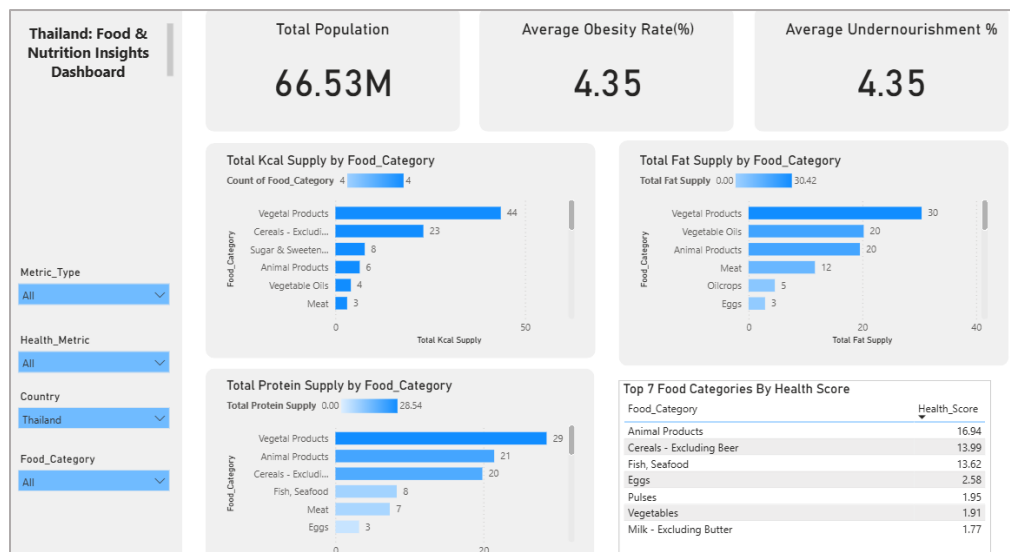

2. Tools: Power BI, DAX, Power Query

DAX measures:

- Total Population
- Total Kcal Supply
- Total Protein Supply
- Total Fat Supply
- Total Nutrient Supply by Category
- Per Capita Protein Supply
- Average Obesity Rate
- Average Undernourishment Rate
- Health Score

3. Key Insights

- Vegetal Products account for the largest share of total calories supply.
- Vegetal Products also contribute the largest share of protein supply.
- The dashboard allows nutritional supply to be compared across different food categories.
- Animal Products and Cereals are among the highest-ranked categories based on the calculated Health Score.
